COURSE OVERVIEW

This course covers the fundamentals of Power Automate, starting with creating and sharing a first flow. It then addresses building approval flows and business process flows for real-world scenarios, followed by flows that manage user information such as locations, dates and calendar entries. The course also covers Power Automate's integration with data sources including Dynamics 365, SQL, Power Apps and SharePoint, along with flow monitoring. It concludes with a guided project to build and manage an automated email flow.
