

PLC and SCADA Automation Training

Learn to configure, program and troubleshoot Siemens S-7 PLCs with TIA Portal and connect them to SCADA systems.

12

MODULES

85

TOPICS

COURSE OVERVIEW

This comprehensive training program delves into the intricacies of Programmable Logic Controllers (PLCs) and Supervisory Control and Data Acquisition (SCADA) systems. Covering 12 detailed modules, the course encompasses fundamental to advanced concepts in automation, including PLC architecture, programming, and operations, as well as SCADA system integration. Participants will gain practical experience through hands-on exercises with Siemens S-7 controllers and TIA Portal, ensuring a thorough understanding of both PLC and SCADA systems and their applications in modern industrial environments.

WHO THIS COURSE IS FOR

This course is designed for:

Engineering students and recent graduates aiming to specialize in automation, PLC, and SCADA systems

Electrical, Electronics, and Automation Engineers seeking to enhance their knowledge and skills in PLC programming and SCADA system integration

PREREQUISITES

- Basic understanding of electrical circuits and digital electronics.
- Familiarity with computer programming concepts.
- Prior exposure to automation systems is beneficial but not mandatory.

LEARNING OBJECTIVES

- Understand the principles of automation and the role of PLCs and SCADA systems
- Learn the architecture and functionality of PLCs, focusing on Siemens S-7 controllers
- Develop proficiency in PLC programming using various languages
- Gain hands-on experience with TIA Portal for PLC programming and hardware configuration
- Explore the integration of PLCs with SCADA systems for effective monitoring and control
- Diagnose and troubleshoot common PLC and SCADA system faults
- Implement practical automation solutions using PLCs and SCADA

12 Modules, 85 Topics

01

Introduction to Automation and PLC

TOPICS

- What is automation?
- Different types of control systems
- Details of the closed-loop control system
- Basic introduction to PLC controller
- Units of PLC
- Advantages and disadvantages of PLC
- Different applications of PLC

02

PLC Architecture

TOPICS

Block diagram of PLC · Different input modules · Different output modules · Power supply modules · Main PLC CPU details · PLC general architecture · PLC capability

03

S-7 Controllers and Programming Languages for PLC

TOPICS

- Different types of S-7 controllers
- Addressing of digital I/Os
- Siemens communication protocols
- Profibus different protocols
- Sink and source concept
- Scan cycle of CPU
- Programming languages for PLC
- Examples (series circuit, parallel circuit, series and parallel circuit)

04

TIA Portal and Programming Languages

TOPICS

- Need for DI module
- Sequence of cyclic program processing
- PLC selection criteria
- Starting with TIA Portal
- **Steps:** hardware configuration, create project view, add new device, click on OB 1, start programming, properties of all hardware
- Communication between PLC and PG/PC
- Clock memory application
- Procedure for “memory reset”
- Different programming languages
- How to convert LDA/FBD/STL

05

PLC Operations and Memory Types

TOPICS

- Writing of instructions
- Different operations (AND, OR, NOR, NAND, XOR, XNOR)
- “Online and diagnostics” for the project
- Data types and details of elementary data types (BIT, byte, word, double word)
- Understanding of RLO and status
- **Different types of memory:** load memory, work memory, and system memory
- Example of 2NO, 1NO+1NC, and 2NC switch
- Use of “SET-RESET” instructions

06

PLC Blocks and Timers

TOPICS

- Application of comparator blocks
- Easy to design your program
- Different types of timers (pulse timer, extended pulse timer, on-off delay timer)
- Counters operation
- Comparison functions
- Examples on the use of timers, comparators, and counters
- Different types of S-7 blocks
- Different types of organization blocks
- Asynchronous error organization block
- Different reset OBs

07

Block Architecture and Program Structure

TOPICS

- Warm restart, cold restart, and hot restart
- Difference between FB and FC
- Block architecture and block editor
- Program structure (take examples)
- Calling of main routine and sub-routine
- Use of “Time-Of-Day interrupt” and “Cyclic interrupt”
- Practical examples

08

Processing of Analog Values

TOPICS

- Processing of analog values
- Generalized block diagram of analog sensors
- Signal flow from analog device to PLC
- 4-wire and 2-wire sensors
- Different types of S-7 blocks
- Schematic wiring diagram of analog modules
- Converting raw values into engineering values

09

Faults and Cross-Reference Function

TOPICS

- Different types of faults: functional and systems faults
- Forcing of I/O variables
- Use of “cross-reference” function
- Concept of “parameter passing”
- Shared data blocks
- Examples

10

Modbus RTU and TCP Communication

TOPICS

Siemens communication protocols · Communication between PLC and PG/PC · Introduction to Modbus · TCP connection with device (PLC)

11

Connection to SCADA

TOPICS

- Creating a SCADA project
- Adding devices to the project
- Establishing communication connections
- Setting Ethernet addresses
- Connecting to non-integrated PLCs
- Runtime settings configuration
- Configuring buttons and outputs
- Basic exercises related to push buttons and displays

12

Practical Examples and Conclusion

TOPICS

Practical examples · Review of the course · Conclusion

WHAT IS INCLUDED

Everything You Need to Succeed

- Koenig course material for every module
- Delivery by certified instructors and subject matter experts
- Hands-on exercises throughout the course
- Course completion certificate from Koenig

ABOUT KOENIG

Who We Are

Established in 1993, Koenig Solutions is a globally recognised training provider with 35+ technology partnerships, 5,000+ training programmes and a network of certified instructors and subject matter experts, supporting individuals and enterprise teams worldwide.
