

## IBM Planning Analytics: Design and Develop Models in Architect (v2.0)

1. Overview of IBM Planning Analytics
2. Create dimensions
3. Build cubes and views
4. Load and maintain data
5. Add business rules
6. Optimize rule performance
7. Transfer data into the model
8. Customize drill paths
9. Using rules for advanced modeling
10. Convert currencies
11. Model for different fiscal requirements
12. Deploy IBM Planning Analytics applications
