Hadoop YARN & Ambari

Hadoop YARN is a framework for job scheduling and cluster resource management. Ambari is a tool that helps in managing, provisioning and monitoring Apache Hadoop clusters. This course will familiarize participants with the basics of Big Data and Hadoop, while describing the architecture and file system of the setup.

- Hadoop fundamentals
- Big Data Approach
- RDBMS Vs. Hadoop
- Introduction to Hadoop
- Hadoop Architecture
- HDFS, YARN, Hadoop setup
- Cloudera Manager
- Ambari
- Job scheduling and monitoring

Course #	Duration
Hadoop YARN & Ambari	**6 days**
