

## **Samba4 as AD Domain Controller**

### **Course Contents**

#### **1. Installing the Samba 4 Server**

- 1.1. Installing and configuring Samba 4 Server's dependencies
- 1.2. Installing Samba 4 Server step by step
- 1.3. Basic validations of the Samba's installation

#### **2. Provisioning Samba 4 as an AD Domain Controller**

- 2.1. Highlighting the planning points for an AD service
- 2.2. Acquiring information for deploying an AD service
- 2.3. Setting up Samba 4 as an AD Domain Controller
- 2.4. Validating the Samba 4 configuration

#### **3. Managing the Samba Active Directory Server**

- 3.1. Understanding the possible roles of the Samba 4 Server on the network
- 3.2. Implementing the AD authentication and authorization for GNU/Linux systems
- 3.3. Configuring the PAM and NSS
- 3.4. Joining the Debian/Ubuntu, GNU/Linux into our Active Directory Domain
- 3.5. Starting with the basic concepts for Group Policies on Samba 4
- 3.6. Trust relationships and replication with Samba 4

#### **4. Replacing a Microsoft Windows Active Directory Server**

- 4.1. Key points to consider before replacing an AD DC
- 4.2. Planning the replacement – tests and validations
- 4.3. Exporting directory entries
- 4.4. Comparing backup data against live data
- 4.5. Replacing the Active Directory Domain Controller

#### **5. Upgrading from Samba Server Version 3**

- 5.1. Distinguishing between Samba Versions 3 and 4
- 5.2. Key points for consideration before the upgrade
- 5.3. Deciding the upgrade approach for Member Servers

#### **6. Printing and File Services**

- 6.1. Introducing SMB/CIFS protocol versions and Samba 4
- 6.2. Introducing the Samba 4 file and print server daemons
- 6.3. Configuring a printer on the Samba 4 Server host using CUPS
- 6.4. Sharing the printer on a Microsoft AD network using Samba
- 6.5. Introducing Microsoft Windows Point and Print Samba Server configuration

#### **7. Extending the Active Directory Schema Using Samba 4**

- 7.1. Planning an Active Directory schema extension
- 7.2. Exporting the current Active Directory schema configuration
- 7.3. Extending the Active Directory schema
- 7.4. Testing and validating the Samba 4 Active Directory schema extension

#### **8. Implementing a Highly Available Distributed File Server**

- 8.1. Configuring GlusterFS for high availability and scalability
- 8.2. Integrating CTDB, GlusterFS, and the Samba 4 Server
- 8.3. Executing tests and validations on the highly available file server

#### **9. The Samba 4 Python Scripting Interface**

- 9.1. Exploring and using the Python interface of the Samba 4 Server

## **Samba4 as AD Domain Controller**

9.2. Introducing Samba 4 Python bindings

9.3. Understanding the power of Python and the Samba 4 Server
