

R12.2 Oracle E-Business Tax Fundamentals

Duration: 3 Days

What you will learn

This R12.2 Oracle E-Business Tax Fundamentals training is designed for customers who have implemented Oracle E-Business Suite Release 12 or Oracle E-Business Suite 12.1. You'll learn about the new features of Oracle E-Business Tax, while setting up a tax model and applying that tax to a transaction using the Oracle Tax Simulator and other E-Business suite applications.

Learn To:

Set up a tax configuration using the Regime to Rate flow.

Manage party tax profiles, configuration owners and service providers.

Set up party, product, and transaction fiscal classifications and explain how these classifications impact tax processing.

Set up and use tax rules.

Manage taxes on transactions and identify E-Business Tax reports.

Manage migrated tax data for students upgrading from Release 11i.

Benefits to You

By taking this course, you'll get a chance to explore details of tax concepts, configuration components, and tax processing. You'll become deeply familiar how E-Business Tax features are used across E-Business Suite applications. If you're an implementer, you'll get the information you need to help you decide which features to implement.
