

## Ubuntu Linux 14.04 LTS Server Administration Course Contents:

### 📁 Introduction

#### 📁 Support

### 📁 Installation

#### 📁 Preparing to install

#### 📁 Installing from CD

#### 📁 Upgrading

#### 📁 Advanced Installation

#### 📁 Kernel Crash Dump

### 📁 Package Management

#### 📁 Introduction

#### 📁 dpkg

#### 📁 apt-get

#### 📁 aptitude

#### 📁 Automatic Updates

#### 📁 Configuration

#### 📁 References

### 📁 Networking

#### 📁 Network COnfiguration

#### 📁 TCP/IP

#### 📁 Dynamic Host Controller Protocol

#### 📁 Time Synchronisation with NTP

### 📁 Remote Administration

#### 📁 OpenSSH Server

#### 📁 Telnet

### 📁 Network Administration

#### 📁 Network Authentication

#### 📁 OpenLDAP ServerUbuntu Linux 14.04 LTS Server Administration

#### 📁 Kerberos

### 📁 Domain Name Service

#### 📁 Installation

#### 📁 Configuration

#### 📁 Troubleshooting

### 📁 Security

#### 📁 User Management

#### 📁 Console Security

#### 📁 Firewall

#### 📁 AppArmor

#### 📁 eCryptfs

## 📁 Monitoring

- 📁 Overview

## 📁 Web Services

- 📁 HTTPD: Apache2 web server

- 📁 Squid - Proxy server

## 📁 Databases

- 📁 MySQL

## 📁 File Servers

- 📁 FTP Server

- 📁 Network File System [NFS]

- 📁 iSCSI Initiator

## 📁 CUPS - Print Server

- 📁 CUPS overview and administration

## 📁 Email Servers

- 📁 Postfix

- 📁 Dovecot server

## 📁 Version Control System

- 📁 Git

- 📁 Subversion

## 📁 SAMBA

- 📁 Introduction

## 📁 Backups

- 📁 Archive Rotation

## 📁 Shell Scripts

- 📁 Creating shell scripts for system administration

## 📁 Virtualization

- 📁 libvirt

## 📁 Control Groups

- 📁 Overview

## 📁 File System

- 📁 Delegation

- 📁 Manager

- 📁 resources
