

Understanding basics of Ethical Hacking with Koenig Solutions

Why understanding basics of Ethical Hacking is so important?

We would like to share that we recently faced a hacking attack on our servers and more than 64 backdoor files were uploaded through exploit scripts by using vulnerabilities present in our website code scripts. At first we couldn't believe on our eyes as we used to keep all of our plugins and core files updated & were following the best security practices to safeguard our blog and it was a horrible nightmare to find such kind of massive intrusion still happening.

What scared us more was the fact that instead of getting help from our hosting provider services, we got a mailer notice in which they warned us to take care of the threats otherwise they will delete all of our data/files from their servers. You got Scared Right ?

Well this wasn't enough, After we requested them to help us in identifying the threat "Backdoor" files they offered their help at a price of \$125 in the name of premium package which was nothing but another trick to get more money out of us. So, we started on our own and scanned all the server files/data (more than 22k files approx.) with the help of exploit scanners and other security software's/applications and came up with the bad news of having some serious threats

like backdoor files and other exploits. Thankfully we got help from our friends in blogosphere and we managed to remove all the exploit files and clean up our hosting servers. We were lucky to have such friends around but not everyone can get such help in these scenarios.

That's why we felt the urge to share a word about **Koenig Solutions**, they are one of the biggest provider of state-of-the-art technical training and certifications on all popular IT technologies available globally. The world class training at Koenig is offered through several innovative learning methods and delivery models to cater the unique requirements of a global customer base.

Koenig is home to more than 300 certified trainers who are subject matter experts in their respective domains. Koenig has 30+ authorizations including that of Microsoft, Cisco, Oracle, VMware, Auto desk, Salesforce, SAP, Citrix, among others.

Koenig learning packages also include ethical hacking certifications and they are a renowned name in CEH certifications. Partnered with EC Council for CEH certified trainings and other Ethical hacking trainings, KOENIG SOLUTIONS provides a cutting edge to the IT professionals seeking career in ethical hacking. Aspirants can register for a variety of IT security trainings in KOENIG including penetration testing, Forensic investigation, ECSA, CEH etc.

We are really thankful to them for conducting a great workshop on ethical hacking for us and helping bloggers to understand the basics of ethical hacking in a fun way. I'm sure now we can handle cyber threats in a more efficient manner and protect our websites and online resources. We would definitely recommend Koenig if you guys are interested to learn courses related to IT sector and do something big.

P.S. Edward Snowden(Founder of Wikileaks) is one of the popular students of Koenig Solutions
